Visit to B&K Construction Company, St. Ann, Missouri

On June 24, 1976, Mr. Robert S. Davis, Vice President, B&K Construction Company was interviewed. Davis stated that the amount of material showing on the invoices submitted to Cotter Corporation was disposed of by trucking to the West Lake Landfill during the period July 16 to October 9, 1973 with the exception of 5,000 tons.

He indicated that this 5,000 tons represented topsoil stockpiled in one corner of the Latty Avenue site. He had removed it and then returned it to the site after disposal operations were completed. This topsoil along with other topsoil was used to dress the site. He felt that he should be paid for handling the stockpile topsoil and the 5,000 tons was included in the amounts on the invoices sent to Cotter Corporation.

Davis stated that while there was no charge for dumping the material at West Lake, he had arranged to have the individual operating the scales there to record the weights of each truck on sheets of paper. He indicated he was required by Cotter Corporation to submit these weight sheets with the invoices. Davis provided copies of the weight sheets which bear the heading "B&K Dirt Hauling" and the date. The following information is recorded: truck number, gross, tare and net weights. A spot check was made of the totals of the net weights shown on the sheets as well as the totals of the net weights for a billing period with the weights on the covering invoices. No discrepancies were found. There were a total of 104 weight sheets associated with these invoices.

The total weight of material trucked to the disposal area shown on the invoices was 48,544.70 tons. Subtracting the 5,000 tons of topsoil referred to above, the amount of material trucked to the disposal area was 43,544.70 tons. The invoices also show a total of 10,763.41 tons of material were shipped by rail to Canon City.

Although the above invoices and weight sheets did not indicate the disposal area to which the material was taken, Davis stated that it was taken to the West Lake Landfill. He offered for review a job card record relating to the Latty Avenue site and several entries were noted for the period July, 16, 1973 to October 10, 1973 which indicated residue was taken to West Lake from Cotter, Latty Avenue.

Davis also stated that in addition to using his own trucks, he arranged for much of the hauling to be done by other trucking firms. He made available for review from his records, bills from these firms. Weekly billing statements with drivers time tickets attached, covering the period August 3, 1973 to October 12, 1973 were noted from Walker Trucking Service, Ferguson, Missouri. These billing statements contain the notation "Latty Avenue to West Lake." Billings were also reviewed which had been received from the following: Bruce Barnes Truck Service, St. Louis; Vic Koepke Excavating and Grading Company, Bridgeton; and H. Reeder Hauling, Inc., St. Louis. On at least some of these billings, there are entries showing that material was hauled from "Latty Avenue" or "Cotter" to West Lake.

It is concluded that the material in question is now buried under about three feet of clean soil at West Lake Landfill. While little significance was attached to the actual location of the disposed material at the time of the 1974 inspection, the licensee was notified, by letter dated November 1, 1974, that the disposal did not appear to be within the intent of the 40 CFR regulations (Exhibit E) concerning alteration of source material to obtain a mixture no longer subject to licensing.

[IE Investigation Report No. 76/01 by NRC Region III – PDF – ML13008A244]

A B&K Construction Company representative said that, as directed by Cotter Corporation, the barium sulfate cake material was spread over a considerable portion of the site and then removed along with the top soil. He added that he thought that this was done to reduce the weight, as the cake material was very heavy and he did not want to fill a truck with only this material.

This material was hauled to the landfill area and used as cover for part of the several hundred truckloads of garbage and refuse that are shipped to the landfill area site every week. The license estimates that the barium sulfate is probably buried under 100 feet of garbage at this time. The trucks were hosed out after hauling this material.
